# Installation candidates

Two types of files are available.

1. Latex base files
2. Complete ISO file

Base files contains only essential packages to compile a document.

## Command line options

The following packages can be downloaded via CLI in most of the Linux machines.

- texlive-base - 160 MB
- texlive-latex-recommended - 203 MB
- texlive - 269 MB
- texlive-latex-extra - 464 MB
- texlive-full - 5903 MB

In the above, for common users `texlive-base` with either `texlive` or `texlive-latex-extra` is enough.

If you are using Ubuntu profession targeted packages are also available.

- `texlive-publishers`
- `texlive-science`
- `texlive-pstricks`
- `texlive-pictures`
- `texlive-metapost`
- `texlive-music`
- `texlive-xetex`
- `texlive-luatex`
- `texlive-games`
- `texlive-humanities`

## CLI installaion

### For Ubuntu:

```
sudo apt install texlive-base
```

### For Fedora:

```
sudo dnf install texlive-base
```

### For Arch:

```
sudo pacman -Syu texlive-base
```

# ISO file installation

For modern documents it is recommended to use .iso file

The ISO file can be downloaded from here: [TexLive 2020](#)

In linux machine, right click the iso and open it with image mounter.

Now, you should see the image mounted and files should also be accessible.

In the case of macOS, go to *Disk utility* and choose *Open Image File*. You should be see the image file mounted on the Desktop.

Here after the installation is pretty striaght forward.

1. Open or navigate the terminal to Texlive directory
2. Run `sudo ./install-tl`
3. It will prompt to an window like this:

```
<0> options:
[ ] use letter size instead of A4 by default
[X] allow execution of restricted list of programs via \write18
[X] create all format files
[X] install macro/font doc tree
[X] install macro/font source tree
[ ] create symlinks to standard directories
[X] after install, set CTAN as source for package updates

<V> set up for portable installation

Actions:
<I> start installation to hard disk
<P> save installation profile to 'texlive.profile' and exit
<H> help
<Q> quit

Enter command: 
```

4. Enter  as the command

=====

Options customization:

<P> use letter size instead of A4 by default: [ ]  
<E> execution of restricted list of programs: [X]  
<F> create all format files: [X]  
<D> install font/macro doc tree: [X]  
<S> install font/macro source tree: [X]  
<L> create symlinks in standard directories: [ ]  
    binaries to:  
    manpages to:  
    info to:  
<Y> after install, set CTAN as source for package updates: [X]

Actions: (disk space required: 5845 MB)

<R> return to main menu  
<Q> quit

Enter command: █

5. Now choose L in the command and accept the default values
6. Then enter R to return menu and type I to begin the installation
7. It would take 10 - 15 mins depending on machine configuration.
8. Once the installation finished type `latex --version` to verify the installation

# Video Demo

The screenshot displays a Linux desktop with a dark theme. In the foreground, a file manager window titled 'TeXLive2019' is open, showing a directory with files: 'archive', 'autorun.inf', 'index.html', and 'install-tl'. A terminal window is overlaid on the file manager, displaying the following text:

```
File Edit View Search Terminal Help
<F> create all format files: [X]
<D> install font/macro doc tree: [X]
<S> install font/macro source tree: [X]
<L> create symlinks in standard directories: [ ]
      binaries to:
      manpages to:
      info to:
<Y> after install, set CTAN as source for package updates: [X]

Actions: (disk space required: 5845 MB)
+ <R> return to main menu
  <Q> quit

Enter command: L
New value for binary directory [/usr/local/bin]:
```

Below the terminal window, a bar shows the progress of the installation for 'release-texlive.txt', 'source', 'texlive-doc', and 'tlpkg'. In the background, a system monitoring dashboard is visible, showing CPU usage (12.25%), MEM usage (6.28%), DISKS usage (972B / 1.64MiB), and WIFI / WLAN usage (972B / 1.64MiB). The date and time are displayed as 'Monday June 08, 2020' and 'Mon Jun 8, 8:17 PM'.
